# Proposed Changes

- MS3 – Installer Integration with OpenStack
  - Break single milestone into 3 sub-milestones
    - 3.0 OpenStack Integration + nosdn deploy + Functest support for health check
    - 3.1 Installers pass health check
    - 3.2 Deploy integrated SDN scenario and pass health check
- MS4 – Infrastructure changes complete
  - Repurpose as "Test Framework Ready"
  - i.e. test frameworks have completed integration and self validation tasks and are ready to support feature project test case implementation

OPNFV

MS3 – OpenStack Integration

3.0
- Openstack integration
- deploy nosdn scenarios
- Support for functest health check

2-3 weeks

3.1
- Nosdn scenarios pass health check

2-3 weeks

3.2
- Deploy scenarios with integrated SDN controller
- Pass health check

Why?

- Changes to MS3 verify and make transparent that installer integration passes health check

- Takes into account coupling between installer integration, functest integration, and support for health check

- More granular view of installer integration steps from integration, to nosdn deploy, to sdn deploy.

- Changes to MS4 provide more structure for test framework projects.
