

# Security Subcommittee (SECCOM) Overview

6 May 2021

# SECCOM focus areas

## Requirements & Architecture

Defined security requirements for ONAP and VNFs, service mesh, logging

## Security Framework

Adopted Core Infrastructure Initiative (CII) Badging as secure development framework

	CII Passing Requirements		
	Total	Non-Security	Security
Basic Requirements	12	10	2
Change Control	9	3	6
Reporting	8	2	6
Code Quality	13	3	10
Security	16	0	16
Analysis	8	0	8
<b>Total</b>	<b>66</b>	<b>18</b>	<b>48</b>

## Vulnerability Testing

Integrated software composition analysis and vulnerability scanning into Jenkins

**onap-aai-babel Build Report**  
2021-04-24 17:13:07 UTC-0500

**8** **8** **51** **67 VIOLATIONS** Affecting 64 components **155 COMPONENTS** 89% of all components identified

THREAT	POLICY	COMPONENT
security		component name
10	Security - Critical vulnerabilities	com.fasterxml.jackson.core : jackson-core
10	Security - Critical vulnerabilities	commons-io : commons-io : 2.6
10	Security - Critical vulnerabilities	Log4j : log4j : 1.2.17
10	Security - Critical vulnerabilities	org.eclipse.jetty : jetty-io : 9.4.25
10	Security - Critical vulnerabilities	org.eclipse.jetty : jetty-webapp :
10	Security - Critical vulnerabilities	org.springframework : spring-we

## Secure Configuration

Test ONAP configuration during build: language version, HTTPS, Docker/K8s, ports

✗	<a href="#">tern</a>
✓	<a href="#">root_pods</a>
✓	<a href="#">unlimited_pods</a>
✓	<a href="#">cis_kubernetes</a>
✗	<a href="#">versions</a>
✗	<a href="#">nonssl_endpoints</a>
✓	<a href="#">jdpw_ports</a>
✓	<a href="#">kube_hunter</a>

# Requirements and architecture

## Requirements

- ONAP platform requirements: [ONAP Security Requirements](#)
- VNF security requirements: [VNF Security Requirements](#)
- ONAP security model: [ONAP Security Model](#)
- Release requirements
- Recommendations for infrastructure packages: [Database, Java, Python, Docker, Kubernetes, and Image Versions](#)

## Architectures

- Authentication & authorization
- Service Mesh: [ONAP Security Model](#)
- Logging

Vulnerability reporting: [Reporting Vulnerabilities](#)

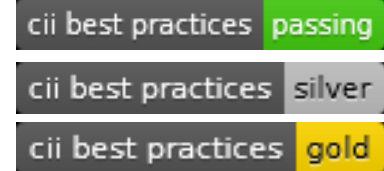

# Security framework

## Core Infrastructure Initiative (CII) Badging

- Open source *secure development framework* based on industry best practices and practices of well-run open source projects
- Increases likelihood of better quality & security
- Designed for any open source project

## Badging requirements

- Development environment requirements
  - Stable website, open source license, and user engagement
  - Use of change control tools
- Code requirements
  - Automated vulnerability testing
  - Vulnerability resolution
  - Quality assurance using automated test suites
  - Cryptographic requirements
- [CII requirements web site](#)
- [ONAP Project CII Badging Status Dashboard](#)

	<i>Passing</i>	<i>Silver</i>	<i>Gold</i>
Basic	12	28	31
Change Control	9	10	13
Reporting	8	10	10
Code Quality	13	29	34
Security	16	27	29
Analysis	8	9	9
<b>Total</b>	<b>66</b>	<b>113</b>	<b>126</b>

# Security testing

## Static application software tests (SAST): SonarCloud

- Weak crypto, insecure config, injection, SSRF, XXE, XSS

## Software composition analysis (SCA): NexusIQ

- Use mean time to upgrade strategy (MTTU)

## Samsung penetration testing

- ONAP Casablanca Security Assessment
- ~200 findings
- 23 CVEs issued for ONAP

### Sample SCA Upgrade Recommendation

Component name and version	CVE	Threat level	Recommended version
<input type="text"/> okhttp : 2.7.5	CVE-2021-0341 <input type="text"/>	7 5	com.squareup.okhttp3 : okhttp : 4.9.1
<input type="text"/> log4j : 1.2.17	CVE-2019-17571 <input type="text"/>	9 7	2.14.1 (log4j-core)
<input type="text"/> tomcat-catalina : 9.0.30	CVE-2020-9484 CVE-2021-24122	7 5	10.0.5

# Secure configuration

## Java and Python upgrades

- Update to Java 11: 22/95 containers with Java 8
- Update to Python 3: 19/55 containers with Python 2

## Pods running as root

## Containers exposing HTTPS outside cluster

## Kubernetes configurations

## Developer tools (jdwp)

## Integration tests

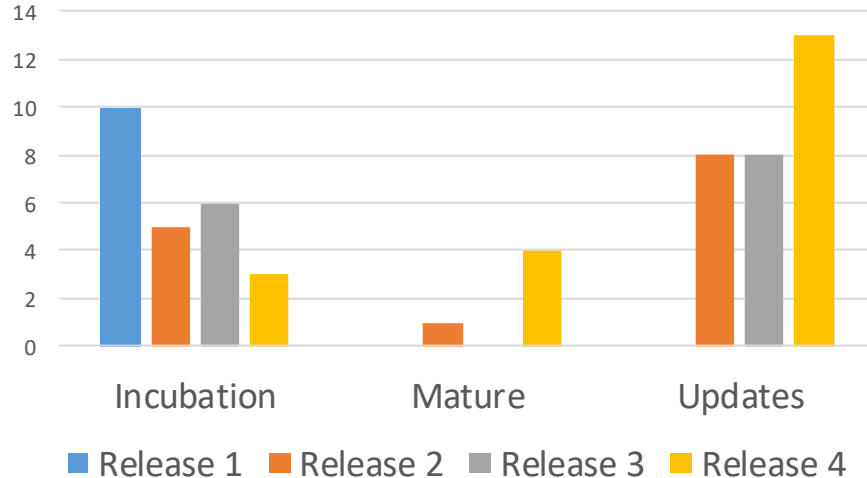

### Sample Java/Python Version Test

holmes-rule-mgmt	['11.0.6']
message-router	['1.8.0_212']
message-router-kafka	['1.8.0_212']
message-router-kafka	['1.8.0_212']
message-router-kafka	['1.8.0_212']
message-router-zookeeper	['1.8.0_212']
message-router-zookeeper	['1.8.0_212']
message-router-zookeeper	['1.8.0_212']
msb-discovery	['1.8.0_131']
msb-eag	['1.8.0_131']
msb-iag	['1.8.0_131']
framework-artifactbroker	['1.8.0_252', '11.0.8']

## Overview

- Akraino is an opensource software stack that improves the state of edge cloud infrastructure for carrier, provider, and IoT networks through the development of Edge and Virtual Network Function (vNF) applications.

## Release Blueprint History

## Current Security Scans

- Vuls – agentless Linux vulnerability scanner
- Lynis – Linux system hardening/compliance verification
- Kube-Hunter – Kubernetes vulnerability scanner

## 2021 Security Sub-Committee Plans

- Minimum OS Version Support Document
  - Ubuntu, CentOS, RHEL CoreOS, Debian
- Formalize/Document Lynis Incubation vs Maturity Requirements
- Require minimum version for Vuls, Lynis and Kube-Hunter used by Bluval
- Process for updating OVAL database to improve scanning accuracy of Vuls
- Platform Security for Akraino Blueprints
  - Arm
  - X86
  - Version 1.0 Platform Security Whitepaper
- Investigate using LFX Security Tools
- Automate Vuls and Lynis Log Output Analysis (Pass/Fail)

**ONAP**

OPEN NETWORK AUTOMATION PLATFORM
