Parth Inamdar

Agenda and Minutes

Sl. no.	Topic	Notes
1	Multiple test suite support in SDV	• Patch in review for adding support for multiple test suites support in the framework. • https://gerrit.opnfv.org/gerrit/c/cirv-sdv/+/72778 • Now we have a Makefile as a helper while doing development work on the sdv framework to quick things up. • Parth Inamdar to add checks in k8s_suite for current work on security checks • We need to rename the airship validator to the "OOK" validator as it applies to multiple installers with OpenStack on Kubernetes deployment topology. • Need to add support for cherry-picking checks. i.e. to disable particular checks for a test_suite while running tests.
2	Intern Updates and Queries	• Clarification: We need to check whether in the cluster(platform) certain linux capabilities for the workload are allowed or not. • Use Test Pod for checking linux capabilities check as an approach. • Almost the same approach for other security checks. • Pre and Post Deployment Validation for Airship 2.0
